Aim: Write a SOAP web service program to implement the operation can receive request and will return a response (Request-Response).

Step 1: Create New project

Step 2: Create New Web Service

Step 3: Deploy the project

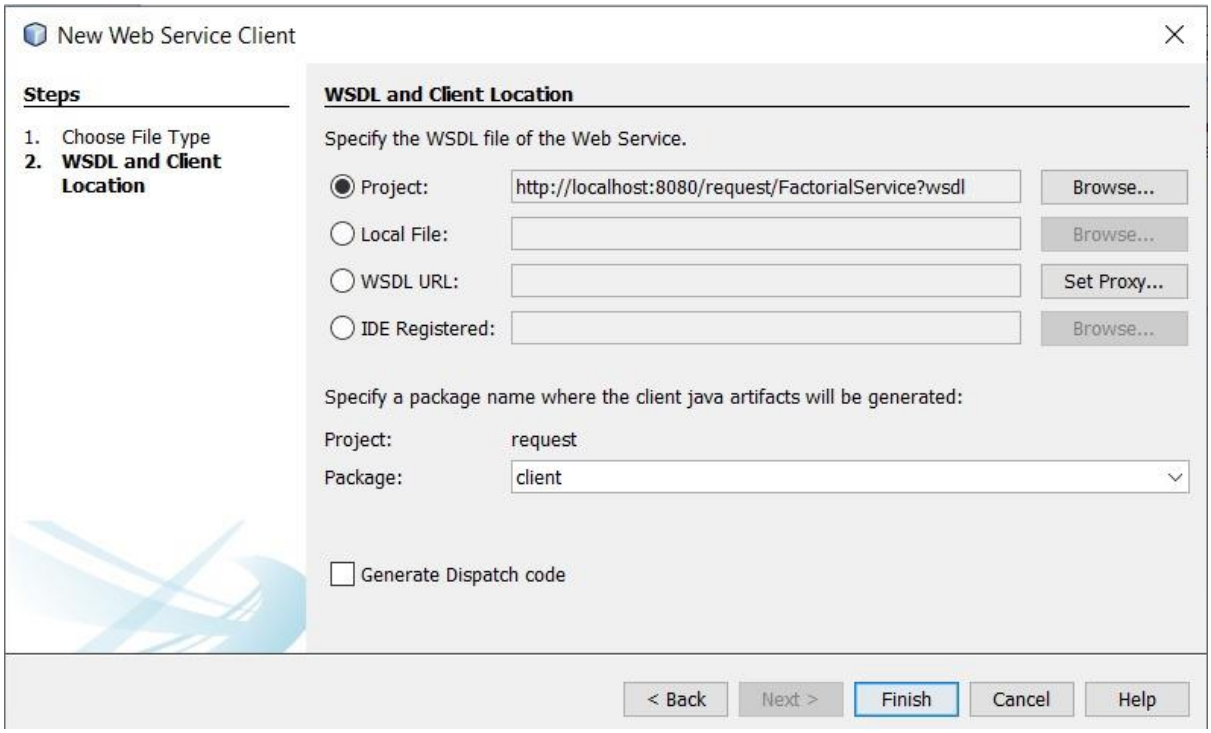

Step 4: Create JSP form

index.jsp | form.jsp | action.jsp | FactorialService.java

Source | History

```
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
    <head>
        <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
        <title>Factorial Result</title>
    </head>
    <body>
<h2>Factorial </h2>
    <form action="action.jsp" method="get">
    Enter number:
    <input type="text" name="num">
    <input type="submit" value="Calculate">
</form>
</body>
</html>
```

Step 5: Create New Web Service Client.

Step 6: Create action.jsp

index.jsp × form.jsp × action.jsp × FactorialService.java ×

Source History

```jsp
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
<head>
    <title>Factorial Result</title>
</head>
<body>

<h2>Factorial Result</h2>

<%
try {
    tyclient.FactorialService_Service service =
            new tyclient.FactorialService_Service();

    tyclient.FactorialService port =
            service.getFactorialServicePort();

    String value = request.getParameter("num");

    if (value == null || value.trim().equals("")) {
        out.println("Please enter a number.");
    } else {
        int num = Integer.parseInt(value);

        int result = port.fact(num);

        out.println("Factorial = " + result);
    }

} catch (Exception ex) {
    out.println("Error: " + ex);
}
%>

</body>
</html>
```

Step 7: Run the file 'action.jsp'

OUTPUT:

localhost:8080/request/form.jsp
Factorial
Enter number: 5
Calculate

localhost:8080/request/action.jsp?num=5
Factorial Result
Factorial = 120
