Practical-8 Develop application to consume Google's search / Google's Map RESTful Webservice.

1. First of all we need to create an Java Web Application with any name, let it be GoogleMap here using Netbeans IDE

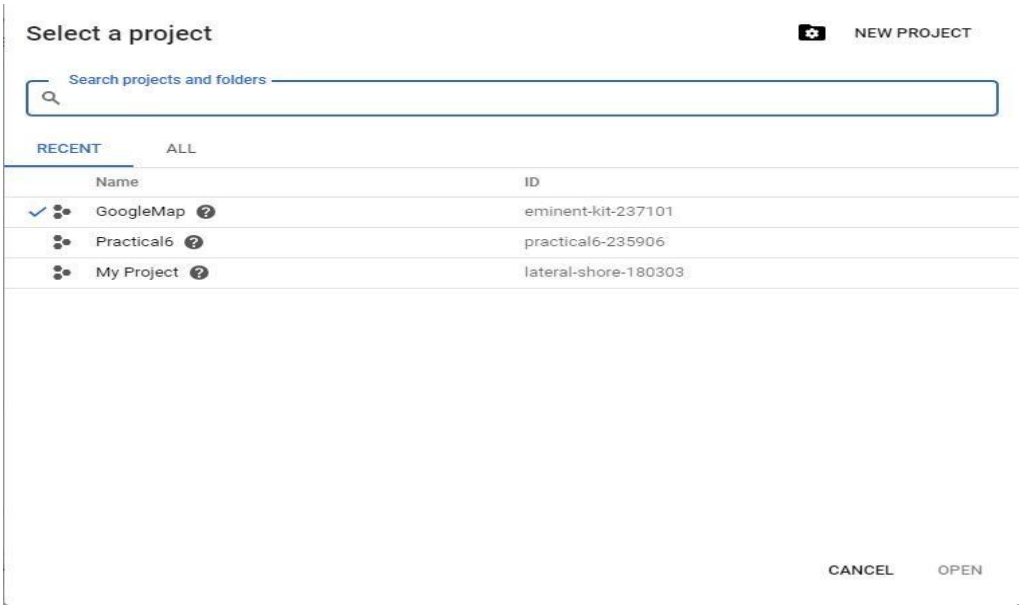

2. The code inside the input.jsp will be similar to this input.jsp Input.jsp

```
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
    <head>
        <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
        <title>JSP Page</title>
    </head>
<body>
    <form action="index.jsp">
        <pre>
          Enter latitude:<input type="text" name="t1" />
          Enter longitude:<input type="text" name="t2" />
          <input type="submit" value="Show" />
        </pre>
    </form>
</body>
</html>
```

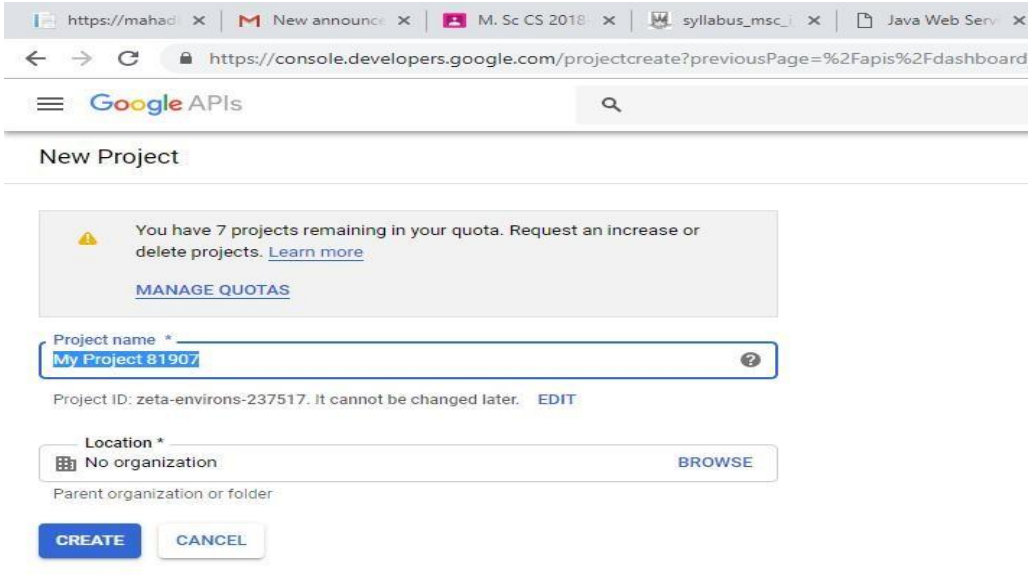

3. Before running the application we need the Google API key. The steps are shown here: - Visit GoogleAPIs Console (https://console.developers.google.com, you have to login with your Google account).

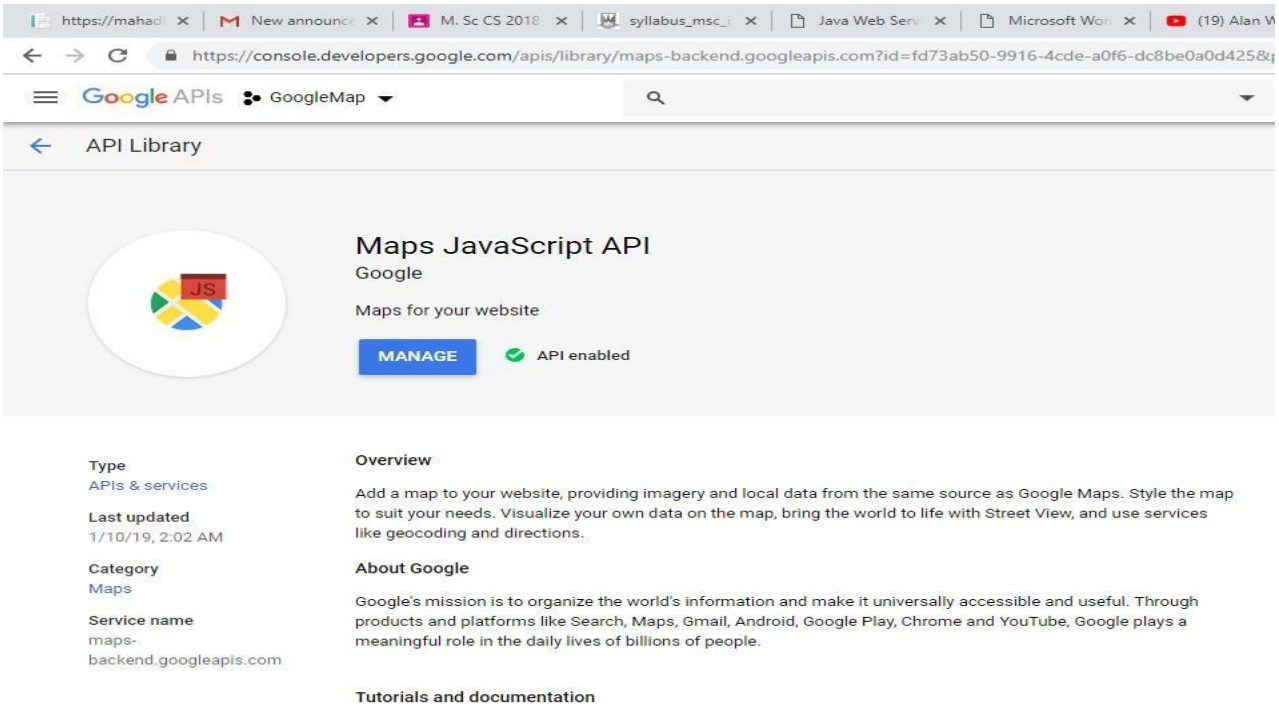

- Create a new API Project.

- Enter the name to your project.

Enable the Google Maps API V3

4. Create another file index.jsp

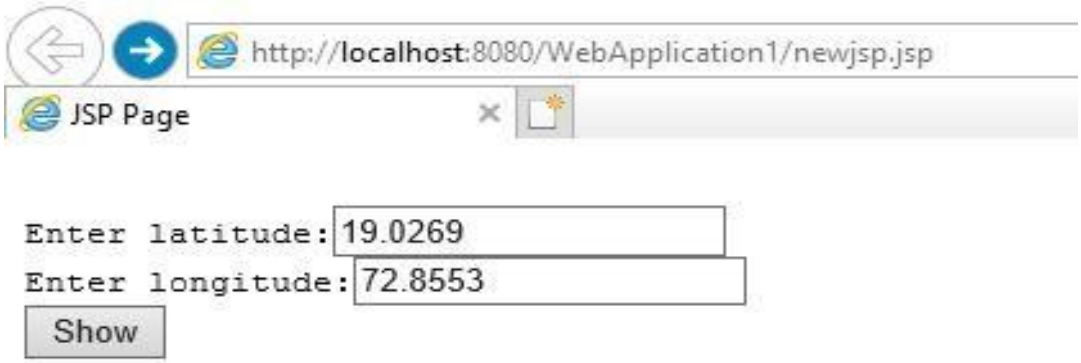

Index.jsp

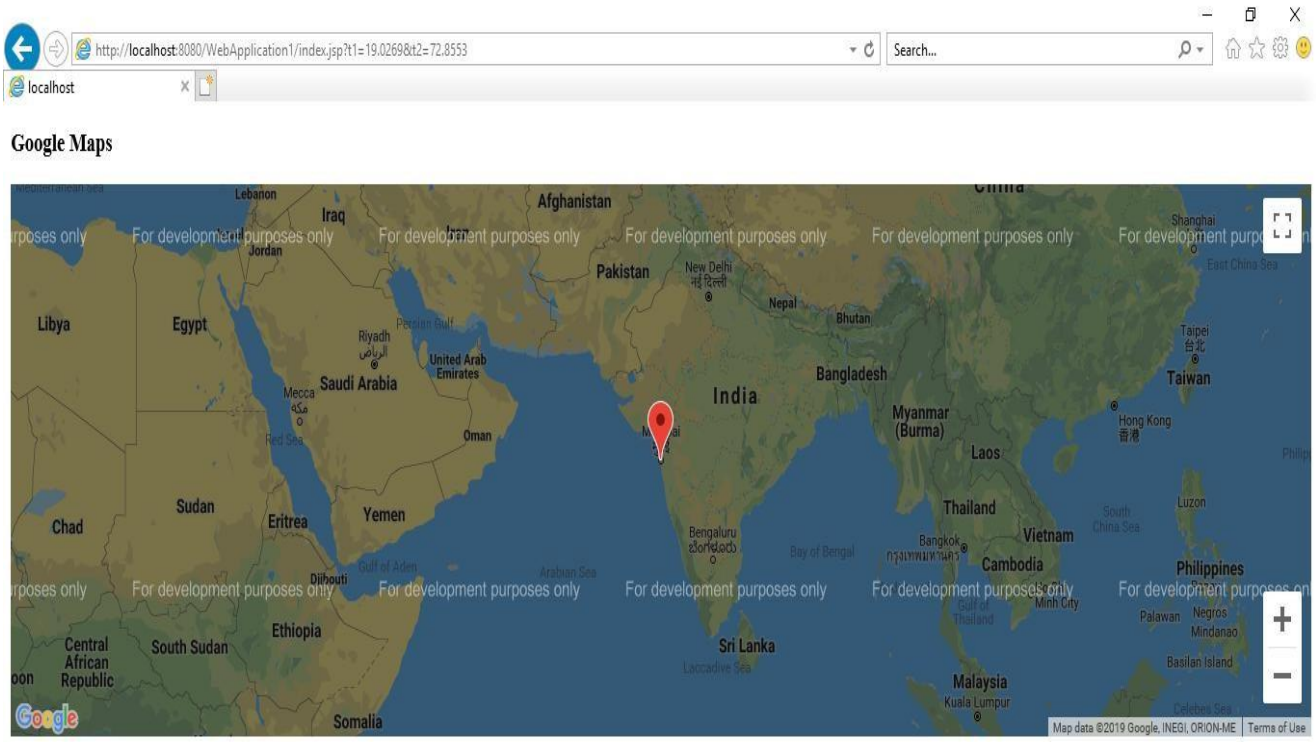

```
<%@page contentType="text/html" pageEncoding="UTF-8"%>

<!DOCTYPE html>
<html>
    <head>
        <style>
            #map {
            height: 400px;width: 100%;
                }
        </style>
    </head>
<body>
```

```
        <%
        double lati=Double.parseDouble(request.getParameter("t1"));
        double longi=Double.parseDouble(request.getParameter("t2"));
        %>
        <h3> Google Maps </h3>
        <div id="map"></div>
    <script lang="javascript">function initMap() {
        var info={lat: <%=lati%>, lng: <%=longi%>};
        var map = new google.maps.Map(document.getElementById('map'),
        {
        zoom: 4, center: info
        });
var marker = new google.maps.Marker({position: info,
        map: map
        });
    }
    </script>
    <script async defer
    src="put your key here">
    </script>
    </body>
    </html>
```

OUTPUT:

http://localhost:8080/WebApplication1/newjsp.jsp
JSP Page
Enter latitude: 19.0269
Enter longitude: 72.8553
Show

http://localhost:8080/WebApplication1/index.jsp?t1=19.0269&t2=72.8553
Search...
